The <div> tag is utilized to group elements together, primarily for styling and layout purposes.

The <h1> heading is the largest and most important heading, typically used for crucial content.

The <h2> heading is smaller in size and less important than the `<h1>` heading.

The <h3> heading is smaller in size and lower in importance compared to the `<h2>` heading.

List tags in HTML are used to organize and structure content into a list format, making the information easier to read and understand. There are three main types of list tags:

Ordered List <ol>: Used for lists where the order or sequence is important, such as steps, rankings, or instructions.

Example:

Unordered List <ul>: Used for lists where the order is not important, such as a list of items, features, or options.

Definition List <dl>: Used for lists that include terms and their definitions, such as glossaries or dictionaries.

2. Unordered List `<ul>` with `<li>`
Used for lists without a specific order or sequence.

- Item 1

- Item 2

- Item 3

3. Definition List `<dl>` with dt <
Used for lists with terms and definitions.

Term 1

There we write description of 1

Term 2

There we write description of 2

The <ol> tag, combined with the `<li>` tag, is used for creating lists with a specific order or sequence.

The <ul> tag, combined with the `<li>` tag, is used for creating lists without a specific order or sequence.

The <dl> tag, along with the `<dt>` (definition term) and `<dd>` (definition description) tags, is used for creating lists with terms and their corresponding descriptions.

Tables in HTML are used to display data in a structured format, typically with rows and columns

Table containing Name, Age and City coloum

Name	Age	City
